Attention!!

These fork tubes have been manufactured and tested for exact fit and application per model. It can be difficult to identify the front end assemblies because they may not always be the original equipment. Before installing, compare old and new tubes. Be sure the stock top plugs fit into the new fork tubes. To avoid scratching the chrome, we suggest that the tubes be lightly rubbed with oil before installing into fork legs or fork trees. Be absolutely sure you have the right tubes before you install them.

No fork tubes can be accepted for return that are scratched or damaged due to improper installation or handling.
